Streamlining IT Security Management:

Protecting financial data with a complete solution

OPTIV

A large, family-owned convenience store chain needed a robust information security strategy **TO PROTECT THE FINANCIAL INFORMATION OF ITS CUSTOMERS.**

This meant securing the credit card transactions the company conducts each month and ensuring that customers' financial information doesn't fall into the wrong hands.
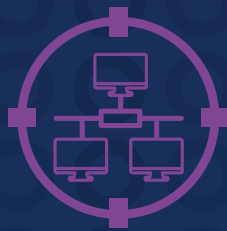

PAY

Not only would a data breach break the trust the business had built with millions of customers in hundreds of communities, it would expose the company to lawsuits, noncompliance hearings and bad PR. To protect customer data, the company wanted a web filtering and secure remote connectivity solution.
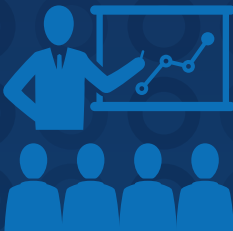

With this service, Optiv:

Identified and deployed a web filtering solution to monitor and block inappropriate internet activity.

Deployed a remote access IT management solution to remotely monitor the POS system.

Optiv's product deployment services provided this client with many benefits, including:

Decreased risk: reduced the chance of data breaches by protecting customer data.

Compliance: improved its compliance with PCI requirements, decreasing the risk of lawsuits and fines.

Resources: enhanced its IT efficiency and saved valuable resources.
