CLOUD

You Can Have It All – More Enterprises Share Data in the Cloud, Securely

A recent report found that though the number of unsanctioned applications running on network cloud infrastructures, or "shadow IT", is increasing, employees are sharing more data more securely through the cloud than ever before. As organizations race to the cloud, learn how they're making the change responsibly as they increase use of cloud applications.

IAM

Identity: Fast Becoming the New Perimeter

The National Institute of Standards and Technology (NIST) recently announced plans to update its cyber security framework with an increased focus on identity management. Learn how this new category, called Identity Management, Authentication and Access Control, raises awareness about the increasing role of IAM in today's evolving IT landscape.

VIDEO

Overcoming Challenges [video]

Check out this clip of Optiv's own, vice president of cloud security and strategy JD Sherry at RSA as he discusses the challenges of identity in the cloud. See JD's perspective on the cloud, and how even though it can be intimidating to organizations, changing the way you look at it can make all the difference.
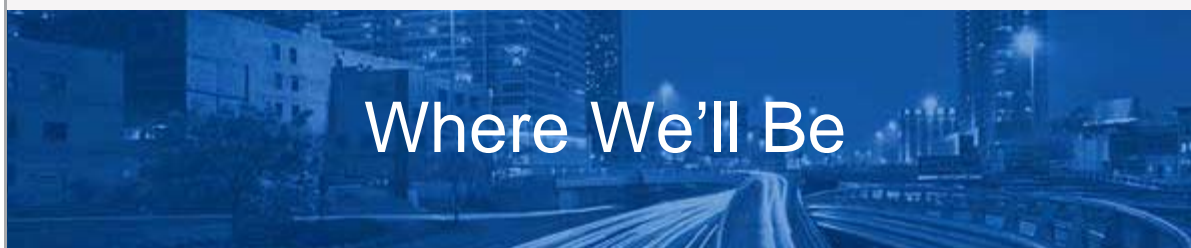

Optiv Service Spotlight

Moving Forward with Identity and Access Management
Identity is truly everywhere. Do you know the best ways to address it? As part of Optiv's market-leading end-to-end cyber security solutions portfolio, we offer comprehensive, integrated IAM solutions to address your identity needs. Our IAM solutions advisors leverage a suite of services that include workshops and assessments, implementation and integration and program governance, as well as technologies developed by Optiv and leading IAM vendors.
