

Cyber Threat Intelligence-as-a-Service

Enhance Threat Visibility Beyond Your Perimeter

Challenge

Identifying when and how your organization may be attacked requires applying broad protection beyond your network perimeter to receive early threat detection via real time attack indications. Unfortunately this capability is not a quick in-house build. It is best implemented by expert cyber threat intelligence (CTI) professionals after they have assessed your threat landscape and maturity level. To be successful, you would also require the in-house people, processes and technology necessary to detect, analyze and remediate threats in real time. The sheer number of available CTI solutions on the market today is overwhelming. This is where working with a trusted partner can add tremendous value to your company.

Solution

Optiv's Cyber Threat Intelligence-as-a-Service solution provides you with an advanced "beyond the perimeter" capability as a part of your cyber security program. Our team of CTI professionals use a fully automated threat data collection and analytics platform to prioritize alerts regarding your adversaries' tactics, techniques and procedures (TTPs). CTI-as-a-Service determines if you have been exploited on the clear, deep and dark web to provide proactive reporting, actionable analysis and detailed remediation guidance. We help you gain a decision advantage by enhancing your visibility into externally validated threats which directly affect your organization, clients, brand, executives or physical location.

Armed with this focused intelligence, you can pivot your security practices and posture to rapidly mitigate identified threats, more accurately define risk and create informed policies. The result will be the confidence in knowing that trained CTI experts are continuously monitoring for threats beyond your perimeter and providing you with focused, prioritized and actionable intelligence. Optiv's CTI-as-a-Service offering will help you more quickly respond to current or potential attacks on your organization.

Benefits of Working with Optiv

Become Proactive: Change your security model from reactive to proactive, and address any outstanding problems slowing you down.

Build a Strategy: Enable security investment strategies that better manage business risk.

Enhance Visibility: Receive indications of pending attacks and leaked sensitive data that might have already been stolen.

Improve Decisions: Turn collected data into accurate, timely and relevant reports that help you with remediation.
